Content

In our everyday life we are surrounded by many leather products, which we perceive consciously or unconsciously. Sofa, car seats, handbags, belts, wallets are just a few examples. Besides the comfort and quality of the single leather products, decorative seams play an important role. High-quality decorative seams enhance the leather products and give it exclusivity. In addition, decorative seams underline the high-quality design of the leather products and give them a personal touch. The seam appearance is determined by different parameters. For example the adjusted stitch length, the used needle and the used thread give each leather product a different appearance. These high demands can only be met with high-quality and process-reliable equipment. Dürkopp Adler offers suitable operating resources and additional equipment which enable a qualitative further processing of the leather. Dürkopp Adler is the largest European manufacturer and one of the world's technology leaders in the field of industrial seaming equipment. The product range extends from robust machines for smaller craft businesses through productive, process-safe special machines and sewing units to complex CNC-technologies. Get impressed by the innovative strength of Dürkopp Adler as leaders in industrial sewing technology.
